TECHNOGYM VILLAGE

introduzione

Uniform nasce nel 1988 con l'obiettivo di realizzare sistemi per serramenti esterni all'avanguardia della tecnica e del design. Tutta la nostra produzione è ispirata ai principi dell'architettura eco-sostenibile, come il risparmio energetico, la riduzione delle dispersioni termiche e l'isolamento acustico. Il risultato della nostra ricerca è **Unitherm**: un sistema di facciate continue in rovere lamellare con rivestimento esterno in alluminio o bronzo. Grazie alla sinergia fra il legno e il metallo, la facciata continua si 'trasforma' in un elemento dalle prestazioni eccezionali, esprimendo una durata pressoché illimitata nel tempo grazie alla resistenza del metallo all'aggressione delle intemperie. Questo volume è dedicato al Technogym Village, progetto realizzato da Antonio Citterio Patricia Viel and Partners nel quale l'eleganza e la versatilità delle facciate in rovere lamellare Unitherm sono diventate strumento ideale per trasformare l'idea in progetto esecutivo. Scoprirete il calore del legno e la forza del metallo, natura e tecnologia unite per farvi vivere ogni giorno nel massimo comfort.

introduction

Uniform was established in 1988 with the aim of creating systems for doors and windows with state-of-the-art technology and design. Our entire production is based upon the principles of sustainable architecture, such as: energy saving, reduction of heat loss and acoustic insulation. The result of our research is Unitherm: a curtain wall system produced using glulam oak with external cladding of aluminium or bronze. Thanks to the synergy between wood and metal, the curtain wall is transformed into an element with exceptional performances: the endurance of metal against weathering provides unlimited life time. This volume is dedicated to Technogym Village, project realized by Antonio Citterio Patricia Viel and Partners in which the elegance and versatility of glulam oak curtain walls Unitherm became the ideal instrument for transforming the idea in executive project. You will discover the warmth of wood and the strength of metal, nature and technology combined together to let you experience maximum comfort every day.

TECHNOGYM

Nerio e Pierluigi Alessandri

"Secondo la nostra filosofia il nuovo TGV non doveva essere solo uno stabilimento produttivo, doveva essere molto di più: doveva rappresentare uno stile di vita, di filosofia wellness, di educazione alla salute in modo da far vivere a tutte le persone coinvolte nel nostro ambizioso progetto un'esperienza wellness. Per fare questo avevamo bisogno di realizzare un ambiente architettonicamente wellness, ispirato ai concetti dell'eco-sostenibilità e della bio-architettura. Abbiamo deciso di far progettare il Technogym Village all'arch. Antonio Citterio perché ha l'esperienza per saper interpretare la filosofia e la storia dell'azienda e per dare forma attraverso un'icona al brand Technogym.

Ecco quindi la scelta di utilizzare materiali naturali come il legno in grado di garantire un basso impatto ambientale e di trasmettere una sensazione di armonia e di interazione tra uomo e natura. Le facciate continue in rovere lamellare Unitherm impiegate anche nel Wellness Center hanno saputo interpretare in maniera sapiente il nostro concetto di architettura wellness traducendo nella realtà le nostre ambizioni, la nostra scelta culturale e di vita"

"In accordance with our philosophy, the new TGV was not meant to be just a manufacturing plant - but much more. It had to represent an enhanced way of life - and introduce a culture of personal well-being and improved health education, so as to enable the people involved in our ambitious project, to enjoy and benefit from a healthier life-style.

To do this we needed to create an architecturally enhanced environment, inspired by the concepts of eco-sustainability and bio-architecture. We appointed architect Antonio Citterio for the design because he has the experience and knowledge to interpret the philosophy and history of the Company and mould it, through an icon, to the Technogym brand.

Therefore, it followed that the choice of using natural materials, such as wood, was able to guarantee a low environmental impact and convey a feeling of warmth and harmony from interaction between man and nature. The engineered glulam oak curtain walls Unitherm, also used in the Wellness Centre, were able to translate that ecological concept into the reality of both, architectural and cultural harmony, for the benefit of all."
